PROFESSIONAL SUMMARY

Fresh graduate in Netcentric Computing with hands-on experience in **full-stack web and mobile development** using Next.js, Flutter, and Node.js. Built an emotion-based music recommendation system integrating facial recognition and Spotify API. Seeking **Software Engineering and Quality Assurance** roles focused on building scalable, user-centered applications.

EDUCATION

Universiti Teknologi MARA (UiTM)

Bachelor of Computer Science (Hons.) Netcentric Computing | Sept 2022 – Mar 2026

CGPA – 3.10

SKILLS

Languages: JavaScript, TypeScript, C++, Java, PHP, Python

Tools & Technologies: React, Next.js, Node.js, Express.js, REST APIs, Google Cloud Vision API, Postman, Git, Github, Spotify API, TailwindCSS, Cursor, Codex, Laravel, WordPress, Vite, MySQL, Mailtrap API

WORK EXPERIENCES

Web Developer & IT Support Intern – Ranaco Education & Training Institute Sdn. Bhd. | Sept 2025 - Dec 2025

- Redesigned the official landing page using Next.js, TypeScript, and Tailwind CSS, delivering a more responsive and modern interface aligned with the company's branding.
- Developed and maintained the company's main web content using WordPress and Elementor, implementing interactive features including banner sliders, popup videos, motion effects, and responsive layouts.
- Performed end-to-end PC maintenance, including OS formatting, chipset, audio, and network driver installation, and troubleshooting software conflicts to maintain functional workstations.
- Monitored office network and server room infrastructure, troubleshooting Wi-Fi connectivity issues and inspecting network devices to support stable day-to-day operations.

KEY PROJECTS

Music Recommendation System Based on Emotion Detection using Facial Recognition (FYP) | Mar 2025 - Aug 2025

- Built a facial emotion-based music recommender detecting happy, neutral, and sad states via Google Cloud Vision API, delivering personalized Spotify picks for detected emotions and a randomized fallback playlist for neutral states.
- Integrated Next.js, Express.js, and MySQL to connect real-time emotion detection with Spotify's Web API, eliminating the need for manual mood-based music searches.

Boss Vent - Anonymous Voice-to-Feedback System (Loophole Hackathon Event) | June 2025

- Built an anonymous workplace feedback platform using React 18, TypeScript, and Vite, enabling employees to share concerns without revealing their identity.
- integrated sentiment analysis and anonymous email delivery to help identify feedback trends and provide management with timely insights into employee sentiment while maintaining user anonymity.

Restaurant Reservation Management System | *Oct 2024 - Feb 2025*

- Streamlined multi-branch restaurant reservation flow with a full-stack Laravel app, supporting branch-level booking management across multiple locations.
- Integrated geolocation-based branch matching and Mailtrap API for automated booking confirmations, cutting down manual confirmation steps.

IJN College Management System (Web Engineering) | *Mar 2024 - Aug 2024*

- Translated stakeholder requirements into a UML-based system design covering use case diagram, class diagram, sequence diagram, and activity diagram, providing a structured blueprint that guided development and ensured requirements were clearly mapped to system functionality.

AWARDS AND RECOGNITION

Dean's List Award (October 2024 – February 2025 semester session)
